

Catalogue of environmental management services for SMEs

Regulatory compliance, preparation for future regulations and improvement of ESG positioning

Environmental management is no longer just a voluntary possibility. Today there are three levels of demand that affect the activity of companies:

- **Obligations already in force:** carbon footprint, waste management, energy audits, and sustainable mobility plans for work, both at the state level and in Catalonia.
- **Reporting obligations in transformation:** Omnibus Directive I has raised the CSRD thresholds and deferred sustainability due diligence (CSDDD) until 2029.
- **Voluntary standards:** ISO 14001, EMAS, GRI or VSME, increasingly valued by customers, banks, and administrations.

Many of the most demanding obligations are activated from a certain number of employees that most SMEs do not reach. For them, these services are an opportunity to **predict** and improve their access to financing, public tenders, and large supply chains.

At **COTICAN Green** we have organized our services into six areas, designed to adapt to the size and needs of each company.

A. Compliance

We help you to know what obligations affect you and to follow them.

- Initial Environmental Compliance Diagnosis
- Calculation, reduction plan, and carbon footprint recording
- Inventory of greenhouse gas emissions in workplaces in Catalonia
- Periodic energy audit
- Waste management diagnosis and plan.
- Simplified Sustainability Report and Double Materiality Assessment
- Coordination of external verification

B. Sustainable mobility

We support companies in the movement of their staff and fleet.

- Mobility diagnosis and staff survey
- Preparation, negotiation, and monitoring of the Sustainable Mobility to Work Plan
- Audit of fleet access to Low Emission Zones
- Fleet electrification strategy and charging points.

C. Management systems and certifications

Recognition and credibility in the eyes of customers, financial institutions, and administrations.

- Implementation of ISO 14001 (environmental management) and ISO 50001 (energy management)
- EMAS Registration
- "I calculate, reduce, compensate" stamp.
- Preparation for ESG rating platforms

D. ESG reporting and communication.

To measure, count, and communicate your sustainability performance.

- Full ESG Report
- Sustainability report following GRI Standard
- Early adoption of the European Voluntary Standard for SMEs (VSME), which we recommend.
- External ESG communication across the web, networks, and summary memory

E. Preparing for future regulations.

To get a head start on what is next, especially if you are part of the supply chain of large companies.

- Sustainability Due Diligence Exposure Analysis (CSDDD)
- Medium- and long-term decarbonisation roadmap
- Regulatory Surveillance and Continuous Regulatory Update

F. Training and internal governance

To make sustainability part of the organization.

- Sustainability and ESG training for management and staff.
- Creation of corporate sustainability committee and policy

How we work

We start with a first **diagnosis at no cost** to confirm which regulations apply to you, and which services are right for you. With this information, we present you with a proposal tailored to your company. The services can be contracted independently or in combination.

Let us talk.

Do you want to know what obligations affect your company and how to prepare?
